BRIEF DESCRIPTION OF THE RESEARCH PROJECT: In the EU-project GRACE several novel seed-based miscanthus hybrids are being cultivated in marginal lands. The aim is to secure the supply of sustainable-produced raw materials for the growing European bioeconomy. However, to provide an overall C footprint assessment of the whole supply chain, it's necessary to quantify the CO₂ removal and storage potential of the proposed hybrids. The goal of the project is to quantify the impact of the cultivation of these hybrids in terms of: 1) soil organic C sequestration rate and improvement of soil organic matter (SOM) cycle; 2) contribution of their belowground biomass (rhizomes and roots) on CO₂ removal potential and storage. The candidate must have competences in the field of perennial biomass crops (herbaceous and woody crops) and research experience on the C sequestration of perennial cropping systems. In particular, the candidate must possess the technical and analytical skills respectively for sampling and analytical determination of the C content in plant and soil samples and of different SOM pools.

BRIEF DESCRIPTION OF THE RESEARCH PROJECT: The LEO project aims to characterize the phenotypic biodiversity of Italian livestock species. For this purpose, LEO will develop and implement “precision farming” technologies, in particular based on NIR and MIR systems, for the collection of phenotypes important for economic and environmental sustainability and for animal welfare in livestock farms. In a first phase zootechnical and sanitary phenotypes to be measured will be identified, and the protocols necessary for their validation developed. Then, NIR/MIR curves will be calibrated using a set of standard samples and validated protocols. Finally the validated parameters will be collected on a large scale through the AIA system and rechecked on a sample basis. The project will also develop an open data platform with internal data quality control systems. The collected data will finally be analysed to evaluate and represent the phenotypic biodiversity existing within and between breeds in the different zootechnical species, made available to national selection programs and disseminated through scientific and popular publications.

TUTOR: Prof.ssa Floriana Margherita CERNIGLIA

TITLE OF THE RESEARCH PROJECT: The techno-scientific platforms (PTS) and reference communities; The Mind - Human technopole (M-HT) case in Milan.

BRIEF DESCRIPTION OF THE RESEARCH PROJECT: *The project aims to analyze the structure, the functions (acquired and in progress) and the impact (potential and actual) of the so-called “techno-scientific platforms”. These platforms are a specific type of recently established macro-structure, which at first glance appear to be designed to develop research activities on specific subjects (energy, climate change, health and digital). However, the most characterizing element of techno-scientific platforms is that they are also meta-structures aimed at stimulating convergence and collaboration between scientific communities and the economic and institutional entities interested in the object of their research at the local, national and european level. The right national and European combination of these platforms is a pre-condition to attracting talent and human capital, thus enhancing their economic impact and success. The research project has a general and paradigmatic scope on the theme of platforms; but it also focuses on the specific case of the Mind - Human technopole (M-HT) district to identify the KICs, that is the “knowledge and innovation communities”, incorporated in the European institute of innovation and technology (EIT) model. The case of M-HT is interesting because it is located in a “meta-european” territorial belt, which extends from west to east: from France, through Italy to Germany, embracing the three largest european economies. The experimental nature of the topic includes research on the methods of macroeconomics, public economics, the economics of innovation, economic analysis of dynamic structural interdependencies. The research fellow will also have to ensure the collection (and processing) of data for the empirical analyses required in the various phases of the project.*
