FACULTY OF ECONOMIA E GIURISPRUDENZA

ACADEMIC DISCIPLINE: <i>IUS/12 TAX LAW</i>	n. 1 position
--	---------------

PHD is required for the admission.

Duration: one year; can be renewed.

Tutor: Prof. Marco Allena.

Title of the research topic: Taxation of digital economies: tax valorization of new “intangible” economic values.

Brief description of the research topic: Economic digitalisation has led to a radical evolution in the way in which business value is created. The latter, in fact, in the context of digital economies is characterized by a decisive participation of users, who, with their interactions, share (knowingly or not) information intended to be “monetized” by digital platforms, thus generating further value. In this perspective, economic digitalization - if analyzed from the tax point of view - would seem to address the need to consider, for the purposes of taxation, not only the income produced by the digitised economies and the renewal of this within the limits of a given tax sovereignty, but also another form of wealth or the value generated by users through the sharing of their own data which, in turn, after being collected as a result of the use of digital services, give rise to a new value of its own, autonomous and, as such, potentially taxable. This being so, on the basis of the proposals for the taxation of digitised economies expressed - even in very recent times - in the international and European context, once the ways in which interactions between users and digital platforms can concretely generate value have been identified, the research project aims to verify whether the latter can be considered, at least from a theoretical point of view, attributable to taxation. Similarly, given the “intangible” nature of the value in question, the research project aims to investigate: a) the suitability of the current regulatory framework, as well as, upstream, the general principles governing the tax subject, to found a, if any, levy falling on the said intangible value; b) under which type of tax to lead, if necessary, the tax levy; c) how to intercept, even from a purely “practical” point of view, the value assumed as an intangible taxable economic element.

BRIEF DESCRIPTION OF THE RESEARCH PROJECT: Among the factors contributing to the success of a single therapy, in addition to the clinical features, the interactions of a specific drug with other drugs, supplements, herbal products and foods are of not negligible importance in oncology. Foods and food supplements, therefore, can affect the absorption, metabolism, bioavailability and excretion of the drug, could it ineffective, enhance its toxicity or a particular side effects or create even serious undesirable effects. It therefore becomes necessary to determine: - the in silico study of drug interactions - 6 - between medicines, herbal supplements and food; the nutrigenomic and matabolomics basis of individual products (drugs, foods, ect.); the interactions between oral and/or intestinal microbiome and drugs, herbal supplements and foods.
